The present invention provides a civil gas/coal saving multifunction oven-drying box composed of thermal insulation box body and heat exchanger. On the box body there are air exhaust hole, clothes-rack and swinging device. In the heat exchanger there are stove and autocontroller. The heat exchanger makes the burning heat turn into hot air flow to be sent into the box body for drying clothes and the waste gas is isolated on outside of the box. Its main function is stoving the clothes and sheets. The box body can be used as wardrobe to hang 5-6 Western-style clothes. The stove can be taken out and used for warming and cooking.
